

Affinity Tutorial: Design Time CSS

Dreamweaver Design View does not support modern CSS standards very well sometimes. To work around some of the more egregious shortcomings, we included a special Design Time style sheet in your **p7affinity** folder. To deploy it, follow these steps:

Choose Format > CSS Styles > Design-time...

The Design-Time Style Sheets window will open.

Click the plus sign above the Show only at design time box and browse to the **p7affinity-DT.css** file in your **p7affinity** folder.

Click **OK**

This needs to be done for each page you want to "fix". Dreamweaver does not have a facility to apply DT style sheets site-wide.
